Quality ID #334: Adult Sinusitis: More than One Computerized Tomography (CT) Scan Within 90 Days for Chronic Sinusitis (Overuse) – National Quality Strategy Domain: Efficiency and Cost Reduction

2018 OPTIONS FOR INDIVIDUAL MEASURES:
REGISTRY ONLY

MEASURE TYPE:
Efficiency

DESCRIPTION:
Percentage of patients aged 18 years and older with a diagnosis of chronic sinusitis who had more than one CT scan of the paranasal sinuses ordered or received within 90 days after date of diagnosis

INSTRUCTIONS:
This measure may be submitted based on the actions of the submitting eligible clinician who performs the quality action, described in the measure, based on services provided within measure-specific denominator coding. This measure is to be submitted at each denominator eligible visit for patients with chronic sinusitis during the performance period. This measure may be submitted by eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.

NOTE: Include only patients that have a diagnosis of chronic sinusitis from January 1 to September 30th of the performance period. This will allow the evaluation of 90 days after the diagnosis of chronic sinusitis within the performance period.

Measure Submission:
The listed denominator criteria are used to identify the intended patient population. The numerator options included in this specification are used to submit the quality actions allowed by the measure. The quality-data codes listed do not need to be submitted for registry-based submissions; however, these codes may be submitted for those registries that utilize claims data.

DENOMINATOR:
All patients aged 18 years and older with a diagnosis of chronic sinusitis

Definition:
Chronic Sinusitis/Rhinosinusitis - is defined as twelve (12) weeks or longer of two or more of the following signs and symptoms: mucopurulent drainage (anterior, posterior, or both), nasal obstruction (congestion), facial pain-pressure-fullness, or decreased sense of smell AND inflammation is documented by one or more of the following findings: purulent (not clear) mucus or edema in the middle meatus or ethmoid region, polyps in nasal cavity or the middle meatus, and/or radiographic imaging showing inflammation of the paranasal sinuses.

Denominator Criteria (Eligible Cases):
Patients aged ≥ 18 years on date of encounter
AND
Diagnosis for chronic sinusitis (ICD-10-CM): J32.0, J32.1, J32.2, J32.3, J32.4, J32.8, J32.9
AND
Patient encounter during performance period (CPT): 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 99304, 99305, 99306, 99307, 99308, 99309, 99310, 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350
WITHOUT
Telehealth Modifier: GQ, GT, 95, POS 02
NUMERATOR:
Patients who had more than one CT scan of the paranasal sinuses ordered or received within 90 days after date of diagnosis

Numerator Instructions:
INVERSE MEASURE - A lower calculated performance rate for this measure indicates better clinical care or control. The “Performance Not Met” numerator option for this measure is the representation of the better clinical quality or control. Submitting that numerator option will produce a performance rate that trends closer to 0%, as quality increases. For inverse measures, a rate of 100% means all of the denominator eligible patients did not receive the appropriate care or were not in proper control.

Numerator Options:
Performance Met: More than one CT scan of the paranasal sinuses ordered or received within 90 days after the date of diagnosis, reason not given (G9352)
OR
Denominator Exception: More than one CT scan of the paranasal sinuses ordered or received within 90 days after the date of diagnosis for documented reasons (e.g., patients with complications, second CT obtained prior to surgery, other medical reasons) (G9353)
OR
Performance Not Met: One CT scan or no CT scan of the paranasal sinuses ordered within 90 days after the date of diagnosis (G9354)

RATIONALE:
Computerized tomography scanning is expensive, exposes the patient to ionizing radiation and offers no additional information that would improve initial management. Multiple CT scans within 90 days may be appropriate in patients with complicated sinusitis or where an alternative diagnosis is suspected.

CLINICAL RECOMMENDATION STATEMENTS:
The following evidence statements are extracted from the referenced clinical guidelines: AAO-HNS Sinusitis Guideline (2015)

The clinician should confirm a clinical diagnosis of CRS with objective documentation of sinonasal inflammation, which may be accomplished using anterior rhinoscopy, nasal endoscopy, or computed tomography.

Strong recommendation based on cross-sectional studies with a preponderance of benefit over harm.

The purpose of this statement is to strongly emphasize that a diagnosis of CRS cannot be based on signs and symptoms alone, but also requires objective evidence of sinonasal inflammation. Objective confirmation of sinonasal inflammation may be made by direct visualization or by computed tomography (CT) scanning. Nasal endoscopy and CT scanning both have a much higher diagnostic accuracy, but CT scanning includes the small associated risk of radiation exposure, while nasal endoscopy includes an added cost.

CT scanning can help quantify the extent of inflammatory disease based upon opacification of the paranasal sinuses, and improves diagnostic accuracy because CT imaging findings correlate with the presence or absence of CRS in patients with suggestive clinical symptoms. An important role of CT imaging in CRS with or without polyps is to exclude aggressive infections or neoplastic disease that might mimic CRS or ARS.

American College of Radiology ACR Appropriateness Criteria®: Sinonasal Disease (ACR, 2012): Recurrent acute or chronic rhinosinusitis (possible surgical candidate)
Radiologic Procedure: CT paranasal sinuses without contrast Rating: 9
Comments: Consider using as a surgical planning protocol. RRL*: 0.1-1 mSv
Radiologic Procedure: CT paranasal sinuses with contrast Rating: 4
RRL*: 0.1-1 mSv
Radiologic Procedure: CT paranasal sinuses without and with contrast Rating: 3 RRL*: 1-10 mSv
Radiologic Procedure: MRI head and paranasal sinuses without and with contrast Rating: 3
RRL*: 0 mSv
Radiologic Procedure: MRI head and paranasal sinuses without contrast Rating: 2
RRL*: 0 mSv
Radiologic Procedure: X-ray paranasal sinuses Rating: 1
Comments: May be indicated for planning frontal sinus obliteration. RRL*: <0.1 mSv
Radiologic Procedure: SPECT paranasal sinuses Rating: 1
RRL*: 1-10 mSv
Rating Scale: 1,2,3 Usually not appropriate; 4,5,6 May be appropriate; 7,8,9 Usually appropriate *Relative Radiation Level

COPYRIGHT:
The Measures are not clinical guidelines, do not establish a standard of medical care, and have not been tested for all potential applications.

The Measures, while copyrighted, can be reproduced and distributed, without modification, for noncommercial purposes, e.g. use by health care providers in connection with their practices. Commercial use is defined as the sale, license, or distribution of the Measures for commercial gain, or incorporation of the Measures into a product or service that is sold, licensed or distributed for commercial gain.

Commercial uses of the Measures require a license agreement between the user and the PCPI® Foundation (PCPI®); or the American Academy of Otolaryngology – Head and Neck Surgery Foundation (AAO-HNS Foundation). Neither AAO-HNS, nor AAO-HNS Foundation, nor the American Medical Association (AMA), nor the AMA-convened Physician Consortium for Performance Improvement® (AMA-PCPI), now known as the PCPI, nor their members shall be responsible for any use of the Measures.

The AMA’s and AMA-PCPI’s significant past efforts and contributions to the development and updating of the Measures is acknowledged. AAO-HNS and AAO-HNS Foundation are solely responsible for the review and enhancement (“Maintenance”) of the Measures as of August 14, 2014.

AAO-HNS and AAO-HNS Foundation encourage use of the Measures by other health care professionals, where appropriate.

THE MEASURES AND SPECIFICATIONS ARE PROVIDED “AS IS” WITHOUT WARRANTY OF ANY KIND.

Limited proprietary coding is contained in the Measure specifications for convenience. Users of the proprietary code sets should obtain all necessary licenses from the owners of these code sets. AAO-HNS, AAO-HNS Foundation, the AMA, the PCPI and its members and former members of the AMA-PCPI disclaim all liability for use or accuracy of any Current Procedural Terminology (CPT®) or other coding contained in the specifications.
2018 Registry Flow for Quality ID #334: 
Adult Sinusitis: More than One Computerized Tomography (CT) Scan Within 90 Days for Chronic Sinusitis (Overuse)

Start

Denominator

Patient Age at Date of Service ≥18 Years

Yes

Not Included in Eligible Population/Denominator

No

Diagnosis of Chronic Sinusitis as Listed in Denominator (1/1/2018 thru 9/30/2018)*

Yes

Encounter as Listed in Denominator (1/1/2018 thru 12/31/2018)*

Yes

Telehealth Modifier: GQ, GT, 95, POS 02

Yes

Include in Eligible Population/Denominator (80 visits)

No

Data Completeness Met + Performance Met**

G9352 or equivalent (40 visits)

More than One CT Scan of the Paranasal Sinuses Ordered or Received within 90 days after Diagnosis, Reason Not Given

Yes

No

Data Completeness Met + Denominator Exception

G9353 or equivalent (10 visits)

More than One CT Scan of the Paranasal Sinuses Ordered or Received within 90 days after Diagnosis, Documented Reasons

Yes

No

Data Completeness Met + Performance Not Met**

G9354 or equivalent (20 visits)

One CT Scan or No CT Scan of the Paranasal Sinuses Ordered within 90 Days after Diagnosis

Yes

No

Data Completeness Not Met

Quality-Data Code or equivalent not submitted (10 visits)

*See the posted Measure Specification for specific coding (coding combinations) and instructions to submit this measure. 
**A lower calculated performance rate indicates better clinical care or control

2018 Registry Flow For Quality ID:
#334: Adult Sinusitis: More than One Computerized Tomography (CT) Scan Within 90 Days for Chronic Sinusitis (Overuse)

Please refer to the specific section of the specification to identify the denominator and numerator information for use in submitting this Individual Specification. This flow is for registry data submission.

1. Start with Denominator

2. Check Patient Age:
   a. If Age is greater than or equal to 18 years of age on Date of Service equals No during the measurement period, do not include in Eligible Patient Population. Stop Processing.
   b. If Age is greater than or equal to 18 years of age on Date of Service equals Yes during the measurement period, proceed to check Patient Diagnosis.

3. Check Patient Diagnosis:
   a. If Diagnosis of Chronic Sinusitis as Listed in the Denominator equals No, do not include in Eligible Patient Population. Stop Processing.
   b. If Diagnosis of Chronic Sinusitis as Listed in the Denominator equals Yes, proceed to check Encounter Performed.

4. Check Encounter Performed:
   a. If Encounter as Listed in the Denominator equals No, do not include in Eligible Patient Population. Stop Processing.
   b. If Encounter as Listed in the Denominator equals Yes, proceed to check Telehealth Modifier.

5. Check Telehealth Modifier:
   a. If Telehealth Modifier equals Yes, do not include in Eligible Patient Population. Stop Processing.
   b. If Telehealth Modifier equals No, include in the Eligible population.

6. Denominator Population:
   a. Denominator population is all Eligible Patients in the denominator. Denominator is represented as Denominator in the Sample Calculation listed at the end of this document. Letter d equals 80 visits in the sample calculation.

7. Start Numerator

8. Check More than One CT Scan of the Paranasal Sinuses Ordered or Received within 90 Days After Diagnosis, Reason Not Given:
   a. If More than One CT Scan of the Paranasal Sinuses Ordered or Received within 90 Days After Diagnosis, Reason Not Given equals Yes, include in Data Completeness Met and Performance Met.
   b. Data Completeness Met and Performance Met letter is represented in the Data Completeness and Performance Rate in the Sample Calculation listed at the end of this document. Letter a equals 40 visits in Sample Calculation.
9. Check More than One CT Scan of the Paranasal Sinuses Ordered or Received within 90 Days After Diagnosis, Documented Reasons:
   a. If More than One CT Scan of the Paranasal Sinuses Ordered or Received within 90 Days After Diagnosis, Documented Reasons equals Yes, include in Data Completeness Met and Denominator Exception.
   b. Data Completeness Met and Denominator Exception letter is represented in the Data Completeness and Performance Rate in the Sample Calculation listed at the end of this document. Letter b equals 10 visits in the Sample Calculation.
   c. If More than One CT Scan of the Paranasal Sinuses Ordered or Received within 90 Days After Diagnosis, Documented Reasons equals No, proceed to One CT Scan or No CT Scan of the Paranasal Sinuses Ordered within 90 Days after Diagnosis.

10. Check One CT Scan or No CT Scan of the Paranasal Sinuses Ordered within 90 Days after Diagnosis:
   a. If One CT Scan or No CT Scan of the Paranasal Sinuses Ordered within 90 Days after Diagnosis equals Yes, include in the Data Completeness Met and Performance Not Met.
   b. Data Completeness Met and Performance Not Met letter is represented in the Data Completeness in the Sample Calculation listed at the end of this document. Letter c equals 20 visits in the Sample Calculation.
   c. If One CT Scan or No CT Scan of the Paranasal Sinuses Ordered within 90 Days after Diagnosis equals No, proceed to Data Completeness Not Met.

11. Check Data Completeness Not Met
   a. If Data Completeness Not Met equals No, Quality Data Code or equivalent not submitted. 10 visits have been subtracted from data completeness numerator in the sample calculation.

### SAMPLE CALCULATIONS:

<table>
