

Quality ID #398: Optimal Asthma Control

2023 COLLECTION TYPE: **MIPS CLINICAL QUALITY MEASURES (CQMS)**

MEASURE TYPE:
Outcome – High Priority

DESCRIPTION:
Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.

INSTRUCTIONS:
This measure is to be submitted a minimum of **once per performance period** for all patients with a diagnosis of asthma seen during the performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure for the primary management of patients with asthma based on the services provided and the measure-specific denominator coding.

This measure will be calculated with 7 performance rates:

- 1) Overall Percentage for patients (aged 5-50 years) with well-controlled asthma, without elevated risk of exacerbation
- 2) Percentage of pediatric patients (aged 5-17 years) with well-controlled asthma, without elevated risk of exacerbation
- 3) Percentage of adult patients (aged 18-50 years) with well-controlled asthma, without elevated risk of exacerbation
- 4) Asthma well-controlled (submit the most recent specified asthma control tool result) for patients 5 to 17 with Asthma
- 5) Asthma well-controlled (submit the most recent specified asthma control tool result) for patients 18 to 50 with Asthma
- 6) Patient not at elevated risk of exacerbation for patients 5 to 17 with Asthma
- 7) Patient not at elevated risk of exacerbation for patients 18 to 50 with Asthma

NOTE: Patient encounters for this measure conducted via telehealth (e.g., encounters coded with GQ, GT, 95, or POS 02 modifiers) are allowable.

Measure Submission Type:

Measure data may be submitted by individual MIPS eligible clinicians, groups, or third party intermediaries. The listed denominator criteria are used to identify the intended patient population. The numerator options included in this specification are used to submit the quality actions as allowed by the measure. The quality data codes listed do not need to be submitted by MIPS eligible clinicians, groups, or third party intermediaries that utilize this modality for submissions; however, these codes may be submitted for those third party intermediaries that utilize Medicare Part B claims data. For more information regarding Application Programming Interface (API), please refer to the Quality Payment Program (QPP) website.

DENOMINATOR (SUBMISSION CRITERIA 1):

Patients ages 5 to 17 with asthma

DENOMINATOR NOTE: *Signifies that this CPT Category I code is a non-covered service under the Medicare Part B Physician Fee Schedule (PFS). These non-covered services should be counted in the denominator population for MIPS CQMs.

Visits to a primary care setting, regardless of the reason for the visit or the scheduling status of the visit (e.g., walk-in) are to be included. In a multi-specialty clinic setting, patients who have visits from both the primary care setting and the urgent care setting during the performance period are to be included. M1021 may be used if the patient is only evaluated at an urgent care visit and is not considered an established patient to allow for care coordination or follow up.

RATIONALE:

Roughly 7% of adults and children in Minnesota are currently living with asthma. Asthma is a chronic disease associated with familial, infectious, allergenic, socioeconomic, psychosocial, and environmental factors. It is not curable but is treatable. Despite improvements in diagnosis and management, and an increased understanding of the epidemiology, immunology, and biology of the disease, asthma prevalence has progressively increased over the past 15 years.

CLINICAL RECOMMENDATION STATEMENTS:

From the National Quality Forum's 2013 report, Patient Reported Outcomes (PROs) in Performance Measurement:

Patient and family engagement is increasingly acknowledged as a key component of a comprehensive strategy, (along with performance improvement and accountability), to achieve a high quality, affordable health system. Emerging evidence affirms that patients who are engaged in their care tend to experience better outcomes and choose less costly but effective interventions.

Historically, with the exception of collecting feedback on satisfaction or experience with care, patients remain an untapped resource in assessing the quality of healthcare and of long-term support services. Patients are a valuable and, arguably, the authoritative source of information on outcomes beyond experience with care. These include health-related quality of life, functional status, symptom and symptom burden, and health behaviors.

Patient Reported Outcome Measures (PROMs) are standardized instruments that capture patients' self-assessment of their health and can provide timely information on patient health status, function, and symptoms over time that can be used to improve patient-centered care and inform clinical decision-making.

The Asthma Control Test™ (ACT) is a validated self-administered survey utilizing 5 questions to assess asthma control on a scale from 0 (poor control) to 5 (total control) in individuals 12 years and older. © 2002 by QualityMetric Incorporated. The Childhood Asthma Control Test (C-ACT) is a caregiver-assisted, child-completed tool that can be used with or without lung function assessment to assess pediatric asthma control at home or in clinical practice for children ages 4-11 years. It consists of 7 questions of which 4 are child-reported and 3 are caregiver-reported questions. ©2007 The GlaxoSmithKline Group of Companies.

*See the posted measure specification for specific coding and instructions to submit this measure.

**Each component should be submitted in order to determine the data completeness and performance rate for the overall percentage of patients that meet ALL targets represented as the numerator.

***This measure should be calculated with 7 Performance Rates. Review the Sample Calculation to ensure the data completeness and performance rates are calculated accurately. It is anticipated for registry submission that for every Performance Rate, Data Completeness will be submitted. CMS will determine or use the overall Data Completeness and Performance Rate

NOTE: Submission Frequency: Patient-Intermediate

The measure diagrams were developed by CMS as a supplemental resource to be used in conjunction with the measure specifications. They should not be used alone or as a substitution for the measure specification.
